The City may affect such termination by giving Consultant a written notice of termination at the end of its then- current fiscal year.

10.0 SUPPLEMENTAL AGREEMENT

The terms of this Agreement may be modified by written Supplemental Agreement hereto, duly authorized by City Council or by the City Manager, if the City determines that there has been a significant change in (1) the scope, complexity, or character of the Consulting Services to be performed; or (2) the duration of the work. - 2.2) The Consultant to add conservative design assumptions limited to existing paved roadway areas, and clear documentation of survey exclusions during the design phase.

TASK 3: GEOTECHNICAL INVESTIGATION AND RECOMMENDATIONS

3.1) Geotechnical Investigation

The Consultant will lead three (3) supplemental soil borings to be drilled at locations selected to characterize subsurface conditions across the street segments not previously investigated (Prairie Rock Way, King Cotton Lane. These borings will be advanced to approximately 10 feet below existing grade to fully penetrate the pavement section and characterize the fat clay subgrade depth, consistency, and engineering properties. Results will be integrated with the existing 2023 Mondale Trail boring for a comprehensive subsurface characterization across the entire project.

3.1.1 Project Coordination and Site Preparation

The Consultant will lead pre-field coordination with City and project stakeholders. Consultant to submit utility clearance request through Texas 811 Dig Safe (minimum 72-hour notice) and coordinate temporary traffic control plan requirements with the HOA. Consultant will obtain any required permits or access authorizations.

3.1.2 Field Exploration – 3 Supplemental Soil Borings

The Consultant will lead drilling of three (3) soil borings to approximately 10 feet below existing grade using a truck-mounted hollow-stem auger or rotary wash drill rig (CME-55 or equivalent). Boring locations: B-1 on Prairie Rock Way (northern segment), B-2 on King Cotton Ln (middle segment) and B-3 on Thompson Trail (southern loop). Pavement Core followed by continuous split-spoon sampling (SPT) per ASTM D1586 from surface to 10 ft; Shelby tube thin-wall samples (ASTM D1587) within fat clay intervals. Consultant to conduct field classification and boring logs by an experienced geotechnical engineer or supervised technician. Total estimated drilling: 30 linear feet.

3.1.3 Laboratory Testing Program

Consultant to select samples from the two borings to submit to a geotechnical laboratory for:

- Moisture Content (ASTM D2216): 9 tests
- Atterberg Limits – LL, PL, PI (ASTM D4318): 9 tests
- Grain Size Analysis (ASTM D422): 6 tests

3.2 Pavement Evaluation and Design Report

Based on geotechnical investigation results and the 2023 Mondale Trail geotechnical report, Consultant will develop a comprehensive subgrade evaluation and pavement design for all four street segments. The design will replace the documented substandard pavement section and treat the highly expansive fat clay subgrade, incorporating lime stabilization and a full-depth flexible pavement section engineered for a minimum 20-year service life per TxDOT FPS 21 methodology and the Austin District Pavement Design Standard Operating Procedures (September 2024).

3.2.1 Review of Subsurface Data

Consultant to conduct a desktop review of existing pavement conditions based on available project information and the 2023 geotechnical study in addition to a visual inspection of the current roadway conditions and existing landscaping and drainage features. Consultant to perform comparative review of the supplemental geotechnical investigation data against the 2023 Mondale Trail boring and identify any significant subsurface variability across the project and flag anomalies (e.g., fill zones, perched water, high-sulfate soils) that may affect the stabilization design.

3.2.2 Subgrade Characterization and Stabilization Design

Consultant to evaluate the fat clay (CH) subgrade across all segments using integrated boring data and calculate Potential Vertical Rise (PVR) per TxDOT Pavement Manual procedures. Consultant to design lime stabilization program including recommended treatment depth and evaluate high-sulfate risk based on Tex-145-E results and recommend alternate stabilizer (e.g., cement or lime-cement blend) if warranted. Consultant to provide written stabilization recommendations and construction QC criteria.

3.2.3 Pavement Structural Design

Consultant to design full-depth reconstructed flexible pavement sections for all four (4) street segments using TxDOT FPS 21 design methodology. Traffic analysis based on assumed ESALs appropriate for low-volume residential streets (design ADT and truck percentage to be confirmed with client). Design period: 20 years. Section components: HMA surface course, crushed limestone flexible base, lime-stabilized subgrade. Provide recommended typical pavement section(s) applicable to all project street segments.
